

## EMERGENCY 5 Performance Test

### Step 1: Collect information about the hardware

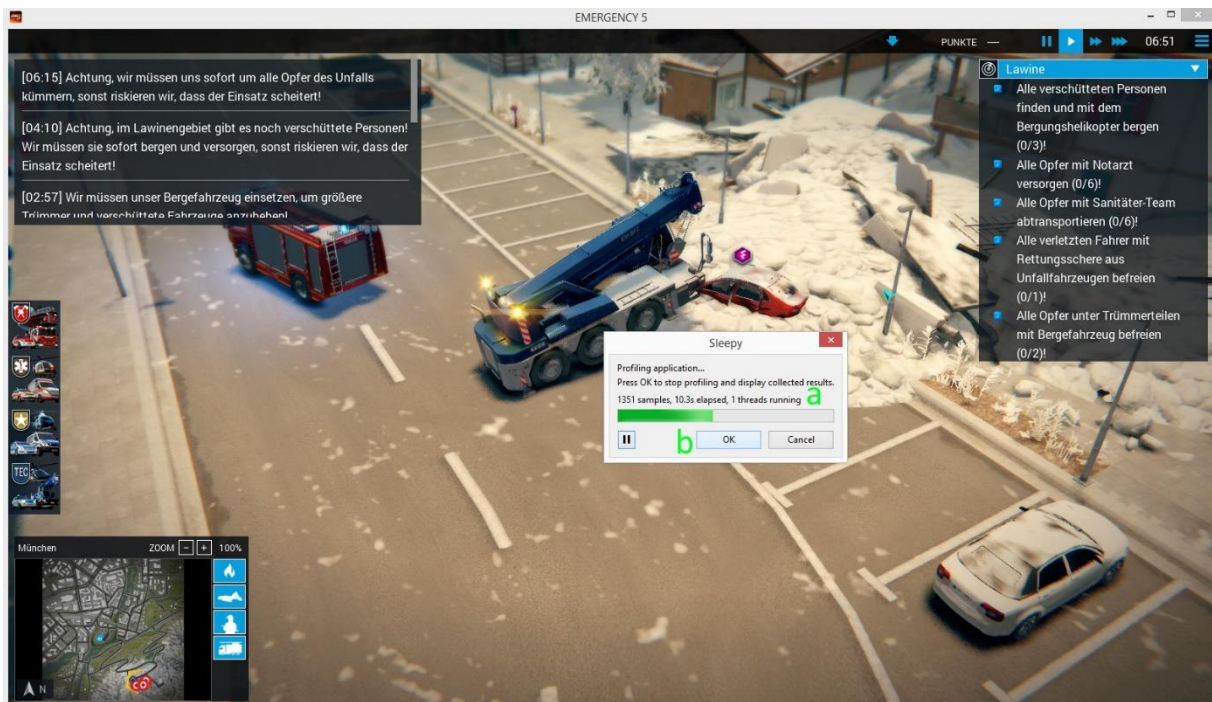

- Open the program search in windows and look for “DxDiag”. Start the program.
- Click on “Save all information...”
- Send us the created txt-file.

### Step 2: Measure what slows down your system and your game

- Download the cost-free software “Very Sleepy”
  - Direct Link: [verysleepy\\_0\\_82.exe](http://www.codersnotes.com/files/verysleepy_0_82.exe) [3.86MB]  
"http://www.codersnotes.com/files/verysleepy\_0\_82.exe"
- Start the game in non-fullscreen mode. Therefore adjust the following settings with a simple editor
  - „C:\Users\\AppData\Roaming\Promotion Software GmbH\Emergency 5\emergency\_5\_settings.json“
  - "qsf::RendererSettingsGroup" -> "Fullscreen": "false"
  
- When the games slows down significantly
  - Start the installed program “Very Sleepy”
  - Click on the process “emergency5.exe” on the left side
  - Double-click the first entry on the right side.

- Let the test run for about 10 seconds. Then click “OK” to end the measurement.

- Select „File“ -> „Save File As“ to save the file. Send us the file to [emergency5@world-of-emergency.com](mailto:emergency5@world-of-emergency.com)
